Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications come from Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at https://www.edexcel.com or https://www.btec.co.uk.

Alternatively, you can get in touch with us using the details on our contact us page.

ResultsPlus

Giving you insight to inform next steps

ResultsPlus is Pearson's free online service giving instant and detailed analysis of your students' exam results.

- See students' scores for every exam question.
- Understand how your students' performance compares with class and national averages.
- Identify potential topics, skills and types of question where students may need to develop their learning further.

For more information on ResultsPlus, or to log in, visit https://www.edexcel.com/resultsplus. Your exams officer will be able to set up your ResultsPlus account in minutes via Edexcel Online.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: https://www.pearson.com/uk.

Introduction

This paper consists of 3 sections. Candidates answer two 25 mark questions from section A, one 20 mark question from section B, and one 35 mark question from section C. The fieldwork questions in section B include questions on both familiar and unfamiliar fieldwork contexts.

The total number of marks for the paper is 105. The examination includes multiple-choice questions, short, open response, calculations and extended response questions. The examination command words which are used in the paper are defined in the specification. Each of the questions is mapped to one or more of the Assessment Objectives (AOs).

In Section A candidates choose one question from Economic Activity and Energy, Rural Environments and Urban Environments. Candidates answered two of these questions. The final part is an 8 mark extended response question that targets AO3 and AO4.

In Section B candidates choose one out of three fieldwork related questions concerning Economic Activity and Energy, Rural Environments or Urban Environments. In this paper there were short response questions based on an unfamiliar fieldwork context followed by an 8 mark extended response question based on a familiar fieldwork context.

In Section C candidates choose one out of three questions covering Fragile Environments and Climate Change, Globalisation and Migration or Development and Human Welfare. This section includes a range of question types finishing with a 12 mark extended response question which targets AO2, AO3 and AO4.

An important part of the extended response question is the particular command word that is used. The use of 'analyse', 'evaluate' or 'discuss' requires candidates to consider how to address these in their response, moving beyond basic explanations and demonstration of knowledge. While many candidates are attempting to address these command words, many still need to ensure that they have made relevant points to demonstrate they have addressed these command words. These extended response questions also require clear use of the resources (the questions remind candidates to refer to the resources). In general, candidates did attempt to include use of the resources provided.

Please note that there are no comments or exemplars for questions 4 and 5. There are comments and exemplars for question 6 as this is the most popular question chosen as an option and all advice and guidance applies to questions 4 and 5 too. The questions are provided in parallel and the resources for each are similar but with a different fieldwork context.

Question 1(a)ii

Most candidates were able to identify one factor that can affect the location of primary sector industries. The most common factor was the availability of raw materials. There were a few candidates who stated “land”; this needed to be qualified, for example “availability of land” for the mark.

(ii) State **one** factor that can affect the location of primary sector industries.

(1)

The availability of raw materials

ResultsPlus
Examiner Comments

This response provides a relevant advantage (1 mark).

ResultsPlus
Examiner Tip

The command word ‘state’ does not require a lengthy response; one or two words or a short phrase is sufficient. However, students must ensure that the answer is specific enough to obtain the mark.

Question 1(c)

In this type of question, it's very important to use information directly from the resource. Most candidates were able to provide a clear reason for the change in tertiary and quaternary employment. The most popular reasons were due to increasing access to education and the rise in mechanisation within the primary and secondary sectors.

(c) Study Figure 1a in the Resource Booklet.

Suggest **one** reason for the change in tertiary and quaternary employment shown.

You **must** refer to the resource in your answer.

(2)

Figure 1a shows that the percentage of employment in the tertiary and quaternary sector increase from 86.1% to 47.1% from 2012 to 2022 due to increase in education so people are able to take on technology & and research jobs.

ResultsPlus
Examiner Comments

In this response the candidate starts by identifying the change using evidence from the figure and then provides the reason for this change (2 marks).

(c) Study Figure 1a in the Resource Booklet.

Suggest **one** reason for the change in tertiary and quaternary employment shown.

You **must** refer to the resource in your answer.

(2)

Mechanisation have e replaced labour as seen in, figure 1a, the decrease in primary sector with the use of automatic harvester. With the rise of machines, secondary sector's most manufacturing work is replaced by automation leaving specific jobs in secondary sector, most people find work in service industries

ResultsPlus Examiner Comments

In this response the candidate starts by providing a reason for the change and identifying the change in the primary and secondary sector (2 marks).

ResultsPlus Examiner Tip

In this type of response, it is very important to use information directly from the source, with the most effective strategy being to use data to identify the change.

Question 1(d)

The majority of candidates were able to name a renewable energy source, with solar being the most popular choice. However, a small number of candidates confused renewable with non-renewable resources.

(d) State **one** example of a renewable energy resource.

(1)

Solar power

ResultsPlus
Examiner Comments

A relevant renewable energy source is identified (1 mark).

(d) State **one** example of a renewable energy resource.

(1)

coal

ResultsPlus
Examiner Comments

The candidate has confused a renewable resource with a non-renewable resource (0 marks).

ResultsPlus
Examiner Tip

Candidates are encouraged to learn the definition and examples of key words throughout the specification.

Question 1(e)

Many candidates were able to provide two ways people can use energy more sustainably in their homes. Most students identified appropriate methods such as improving insulation, installing double glazing and adding solar panels. The highest scoring answers were able to explain how these methods improved energy efficiency or reduced fossil fuel use.

(e) Explain **two** ways people can use energy more sustainably in their homes.

(4)

1 They insulated walls to prevent heat loss to surroundings, leads to less energy lost from ~~energy lost~~ from air conditioning during the summer, and less energy needed for heaters as houses are insulated.

2 People can install solar panels, which uses energy ~~charging their appliances. Not having electricity~~ from the sun to generate electricity. Solar power is renewable, leads to lesser carbon footprint, and hence sustainable use of energy.

ResultsPlus
Examiner Comments

This response has provided two developed responses around insulating walls and installing solar panels. (2+2=4 marks)

(e) Explain **two** ways people can use energy more sustainably in their homes.

(4)

1 People can turn ~~off~~ the lights when leaving a room. This helps to ~~reduce the~~ conserve energy for longer and reduce energy ~~security~~ insecurity over time.

2 People can limit how long they shower. ~~This is~~ This helps to conserve water and reduce water insecurity over time.

ResultsPlus
Examiner Comments

Some candidates confused using energy more sustainably with conservation of other resources such as water. In this response the candidate is credited for the first point of turning lights off when not needed and the development, conserving energy. The second point is not linked to energy use. (2+0=2 marks)

Question 1(f)

The 3-mark 'suggest' questions can be challenging, as they require candidates to demonstrate double development of their ideas. In this question, candidates needed to identify an impact of the coal power station shown in figure 1b. The most common responses focused on the air pollution caused by burning coal. In the strongest answers, further marks were awarded for clearly explaining how this contributes to increased carbon emissions and the enhanced greenhouse effect.

(f) Study Figure 1b in the Resource Booklet.

Suggest **one** potential impact of the energy production method shown.

You **must** refer to the resource in your answer.

(3)

Fig 1b shows a power plant that is producing smoke due to burning of fossil fuels. This can lead to increased levels of air pollution, which can cause respiratory illnesses and affect civilians.

ResultsPlus
Examiner Comments

This response uses photographic evidence of the smoke causing air pollution having an impact on respiratory illness. (3 marks)

(f) Study Figure 1b in the Resource Booklet.

Suggest **one** potential impact of the energy production method shown.

You **must** refer to the resource in your answer.

(3)

this power station burns coal for energy, this process makes alot of pollution, this pollution can reachs cities and towns and can make the air quality bad.

ResultsPlus
Examiner Comments

This response does not name the type of pollution created by the power station shown in figure 1b. (0 marks)

ResultsPlus
Examiner Tip

Candidates should be reminded that pollution by itself is not creditworthy. Named types of pollution such as air, water and visual pollution are all creditable.

Question 1(g)

Many candidates were able to provide suitable factors that can affect energy supply in a developing or emerging country. There is space to indicate their chosen country. Quite a few candidates were not able to select the right development context for their answer. Prevalent answers focus on the availability of natural resources, population growth increasing demand and political instability.

(g) For a named developing or emerging country, explain **two** factors that can affect energy supply.

(4)

Developing or emerging country

India

1 India is a very over - populated country having around 1.3 billion people living there. This means not having enough energy supply for everyone due to higher demand. Therefore India is unable to keep up with the demand.

2 India doesn't have enough financial funds to meet it's energy supply demand.

ResultsPlus
Examiner Comments

This response has provided a developed reason for the first part around the population of India increasing energy demand and therefore supply. The second part gives a creditable reason but there is a lack of development as to how this impacts energy supply. (2+1=3 marks)

(g) For a named developing or emerging country, explain **two** factors that can affect energy supply.

(4)

Developing or emerging country

China

1 China is the major consumer of coal which is a non-renewable source of energy, therefore it could run out and create an energy gap.

2 China is however, also ~~the~~ investing in wind and solar powered energy which creates variety in their energy mix, reduces reliance on coal, so their supply is less vulnerable. ~~remember~~

ResultsPlus
Examiner Comments

This response has provided two developed factors. (2+2=4 marks)

Question 1(h)

These 8 mark style questions require the blending of the use of resources provided with the candidates' own knowledge and understanding. They are not case study questions but are in fact much more applied. The same skill, with the same Assessment Objectives (AO3 and AO4), is tested in the other options for questions 2 and 3. The mark scheme also has three levels which are fixed from year to year.

There is an instruction on the question paper that 'You must use the resource in your answer'. Most candidates clearly used the resource to consider the different relationships shown between population growth and resource availability. To reach the higher level candidates need to do more than describe what is presented in the resource. Clear developed relationships must be shown. The command word 'analyse' needs to be addressed to achieve full marks. Many candidates found this last part challenging as they did not know how to demonstrate analysis. It was encouraging to note that some candidates successfully addressed this, frequently through temporal analysis or by linking their response to contemporary economic development.

(h) Study Figure 1c in the Resource Booklet.

Analyse the different relationships shown between population growth and resource availability.

You **must** refer to the resource in your answer.

(8)

From figure 1c, we can see that Malthus believes population will exceed the production of food as population will increase exponentially while production of food increases with a linear growth. This will lead to famine, war, and conflict when emerge soon after point of crisis. People will fight over food resources and, along with starvation, more people will die. This will eventually cause population to decrease, though this is not shown by the graph 1c.

On the other hand, Boserup suggests an opposite theory. From 1c, we see that similarly to Malthus, population increases exponentially. However, production of food and therefore food supply does not show linear growth but steep changes in food supply. This is because Boserup believes that along with population increase, there will be more advancements ~~made~~ in food production. Each point at which the food supply suddenly increases represent new advancements that help increase the supply, stimulated by population growth. This helps reach a balance.

Another noticeable difference is that at the starting point, food supply is already much larger than the population in Boserup's theory. This may be due to the theories emerging during different time periods, a factor that may influence their theories.

Although figure 1c does propose 2 ideas, it doesn't mention the Club of Rome's theory. They believe that using technology and advancements, similarly to Boserup, and limiting population growth, a balance can be achieved between food supply and population.

While figure 1c suggests different ideas on population VS production of food, there are some similarities such as the acknowledgement population increases exponentially. The graph is also a bit ambiguous. For example, it refers to production of food and population in Malthus theory but 'total' population and food supply in Boserup's theory. **(Total for Question 1 = 25 marks)**

In conclusion, Malthus's theory presents a limitation in food supply while Boserup's represents a potential balance. Although these are on food supply, it represents resources on a larger scale.

ResultsPlus
Examiner Comments

This has reached level 3, 8 marks. To quote from the levels mark scheme: 'Applies understanding to deconstruct information and provide logical connections between concepts throughout. A balanced, well-developed argument that synthesises relevant understanding coherently leading to judgements that are supported by evidence throughout. (AO3) Uses geographical skills to obtain accurate information that supports all aspects of the argument. (AO4) It provides detailed discussion of the Malthus and Boserup theories provided in the resource and there is evidence of analysis. An original idea is provided in the conclusion that considers resources not just food supply on a larger scale.'

(h) Study Figure 1c in the Resource Booklet.

Analyse the different relationships shown between population growth and resource availability.

You **must** refer to the resource in your answer.

(8)

Population growth, which is the increasing rate of the birth of people and resource availibity, is the abundance or availibility of key resources.

In Figure 1c, Thomas malthus had an pessimistic view on population growth in which he believed as time increased so does population, until the population and production of food intersects at a point of crisis, in which population growth will outstrip resources, so the population will decline, However, ester Boserup had an optomistic view, in which population growth will increase in time and when the resources and population will intersect he felieved that resources can keep pace with population growth.

Malthus believed that humans will not be able to fight against the point of crisis, which leads to his pessimistic view, whereas Boserup had a optimistic view when resources can keep pace with population growth, in which he was hopeful and confident about the future, in which he believed that we can all

inventors, and we do fight against future problems.

overall both theorys suggested the growth of the population and a point of crisis, which could be stopped from natural disasters such as floods and droughts which leads to the decline of food.

ResultsPlus
Examiner Comments

This response reaches level 2, 5 marks. There is clear use of the resource but there are only basic reasons provided.

ResultsPlus
Examiner Tip

Approaching this particular set of AOs is a learnt skill and must be practised as part of the learning.

Question 2(a)ii

Most candidates were able to state a biome that is associated with low rainfall. The most popular response was deserts.

(ii) State **one** type of biome that is associated with low rainfall.

(1)

Deserts

ResultsPlus
Examiner Comments

A correct biome (1 mark)

(ii) State **one** type of biome that is associated with low rainfall.

(1)

→ Dedicous forests.

ResultsPlus
Examiner Comments

Not a biome associated with low rainfall (0 marks)

Question 2(c)

With these types of questions, where there is an AO3 mark coming from the resource, it is key to use direct evidence, in this case a picture of a peach farm.

(c) Study Figure 2a in the Resource Booklet.

Suggest **one** piece of evidence that intensive farming operates in this rural area.

You **must** refer to the resource in your answer.

(2)

In figure 2a, a significant proportion of the land is taken up by dense plantations. There are sheets covering the crops, which is a method to increase the crop yield of the smaller plots.

ResultsPlus
Examiner Comments

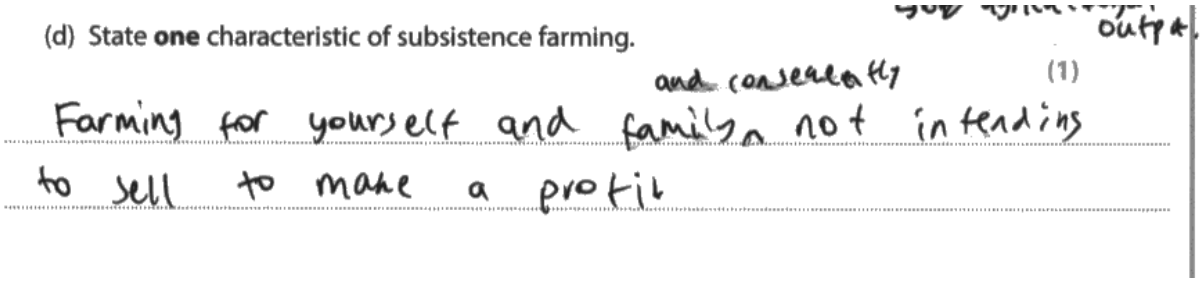

This response uses evidence from the photograph and describes how this is synonymous with intensive farming. (2 marks)

ResultsPlus
Examiner Tip

When a question includes a resource, candidates should clearly describe how the evidence from the resource supports or illustrates the point required by the question. They must go beyond simply stating what the resource shows and explain its relevance to the question being asked.

Question 2(d)

This question requires candidates to state one characteristic of subsistence farming. Most candidates tended to state the characteristics associated with low yields or only farming enough to feed their family.

(d) State **one** characteristic of subsistence farming.

(1)

Farming for yourself and family, not intending to sell to make a profit

ResultsPlus
Examiner Comments

This response provides a relevant idea for 1 mark. It would have been awarded the mark for simply putting farming for yourself and family.

Question 2(e)

In general, there were lots of good answers of the advantages and disadvantages of organic farming. Popular advantages included reduced chemical use and improved soil quality alongside disadvantages like lower yields and higher costs.

(e) Explain **one** advantage and **one** disadvantage of organic farming.

(4)

advantage

~~One advantage is less use of pesticides~~

One advantage is the farmer grows what is in season. This means that they are not reliant on one crop. This reduces the environmental impact on the soil as there is crop rotation. Meaning different resources disadvantage are acpleted.

One disadvantage is high cost for the farmer. This is because they are unable to grow a high volume of crop without the use of capital intensive farming practices. Therefore reducing the revenue

ResultsPlus
Examiner Comments

In this response there is a developed advantage and disadvantage. (2+2=4 marks)

(e) Explain **one** advantage and **one** disadvantage of organic farming.

(4)

advantage

More Sustainable as chemical fertalisers are not used and it does not disturb the more beneficial plants and animals around the farm

disadvantage

~~less~~ Slower growth in crops as it doesn't Speed up & yeild in the same way ~~the~~ fertalisers do.

ResultsPlus
Examiner Comments

In this response the candidate has identified an advantage that chemical fertilisers are not used and the slower growth in crops as the disadvantage. (1+1=2)

Question 2(f)

In this question, candidates were required to use information from the resource to suggest how NGOs can help manage challenges in rural environments. Many candidates correctly identified the role of NGOs in providing technology, funding, and education. However, only a minority were able to develop their chosen examples to explain how these interventions could help address specific challenges faced in rural areas.

(f) Study Figure 2b in the Resource Booklet.

Suggest **one** way non-governmental organisations (NGOs) can manage challenges in rural environments.

You **must** refer to the resource in your answer.

(3)

Since it'll be local communities they know how to manage the area and as people and care alot about it. They can help with improving infrastuve or electricity as they have more knowleadge of the area

ResultsPlus
Examiner Comments

This response correctly identifies from Figure 2b that NGOs can support rural areas by helping to improve infrastructure. (1 mark)

ResultsPlus
Examiner Tip

These 3 mark questions can be difficult, so candidates need to practise how to model a response that develops a single idea or reason and makes reference to information from the resource.

Question 2(g)

Most candidates were able to provide some relevant explanations of ways that the rural economy is changing. The question requires a developed country context. While most did select a suitable country, there were some that did not provide a country context or provided a developing/emerging country. The majority of answers focused on farm diversification and shifts towards tourism.

(g) For a named developed country, explain **two** ways the rural economy is changing.

(4)

Named developed country

China

1 The rural economy in China is change due to the advances the government is making by opening the areas for tourism

2 other reason will be the increase on farming techniques buy starting using GM crops and increasing the amount of irrigation

ResultsPlus
Examiner Comments

This response is limited, providing basic points about opening areas for tourism and using GM crops. (2 marks)

(g) For a named developed country, explain **two** ways the rural economy is changing.

(4)

Named developed country

UK, England

1 The rural economy is increasing due to diversification of farms by adding bed and breakfasts. So more tourism occurs. ~~and~~

2 They also increase economy in ~~have a diversify~~ rural areas by ~~adding more~~ increasing crop yield in agriculture or GM crops so more crops are sold.

ResultsPlus
Examiner Comments

This response is a 2+2 answer with developed ideas around farm diversification and increasing crop yields.

Question 2(h)

This question requires candidates to analyse how water supplies improve the quality of life in rural areas. The resource provided showed how the percentage of villages with piped water access increased over time in China. It was encouraging to see that many candidates made good use of the resource. Even at the lower end of marks, which focused on description of the data rather than explanation, there was clear engagement with the resource to form the response.

(h) Study Figure 2c in the Resource Booklet.

Analyse how the trend shown in water supplies should improve the quality of life in rural areas.

You **must** refer to the resource in your answer.

(8)

Figure 2c shows the increase in percentages of villages with water access from 1970-2016 in China. Over the years, more villages were able to have piped water access. This will improve the quality of life in China by reducing water shortages or reducing agriculture decline. More water means there is less risk ~~of~~ for dehydration, ~~and~~ so people will be healthier. From 1970 - 2005, less than half the percentage of water village had piped water access, so they might have had to get water from wells, ~~lake~~ water holes, river, seas etc. People in rural areas might have had to travel further to get water to provide for their family. In 2016, about 90% of water villages have access to piped water which means water is sent directly to homes. People in China don't need to travel very far and can easily ~~see~~ access ~~water~~ clean water for their daily needs such as cooking, cleaning and showering.

This response contains basic ideas with some reference to the resource. There is limited development of points; however, it is sufficient to move the response beyond Level 1. (4 marks)

(h) Study Figure 2c in the Resource Booklet.

Analyse how the trend shown in water supplies should improve the quality of life in rural areas.

You **must** refer to the resource in your answer.

(8)

Figure 2c shows the change over time (from 1970 to 2016) in the percentage of villages with access to piped water in China. ~~From 1970 the~~ Figure 2c shows an increase in the % of villages with water access over time. An increase in water supplies may indicate an improvement in the quality of life in rural areas since there would be more sanitation, ~~Also, piped and the water can be used to~~ which leads to an increase in health in the ~~country~~ area, increasing life expectancy. This increase in life expectancy improves the HDI component of ~~standards~~ of living which is equivalent to quality of life, ~~and the overall increases the quality of life then~~ Also, if more villages ~~are~~ have access to piped water ~~then it means that~~ out of an the villages, it indicates that there has been a decrease in the inequality of access to services in rural areas, this means that the gini coefficient may improve, ~~signifying~~ a decrease in overall inequality. ~~Also, fewer~~ ~~However, with~~ Although, nearly 80% of villages have access to ~~clean water~~ piped water, as ~~this~~ shown by figure 2c, there is still 20% of villages which don't. This means that in some rural areas the quality of life may not have improved. Also, just because ~~so~~ many villages have piped water, it does not mean that the villages have a lot of it, ~~For example, since~~ and the water needs to be distributed to the entire village.

This means that each individual may not be able to use a lot of water and may need to conserve it, so not really making a large difference on the quality of life. ~~Finally~~, Moreover, the water could cost a lot so not everyone can use it, worsening inequality, and not improving quality of life. Finally, quality of life and ~~standard of living measured in a year~~ are measured by life expectancy, and having safe, clean water isn't the only thing that influences health. For example, rural areas ~~so~~ may not have a lot of food resources so people could be malnourished, reducing life expectancy.

ResultsPlus
Examiner Comments

This response makes effective use of the resource, incorporating data to support a range of well developed points. It also demonstrates clear judgement in recognising that water is not the sole factor contributing to improvements in quality of life. 8 marks

Question 3(b)i

Most candidates were able to state a factor that contributes to rapid urbanisation. There were lots of responses related to rural-to-urban migration, increasing in population and job opportunities.

(b) (i) State **one** factor that contributes to rapid urbanisation.

(1)

Push ~~factors~~.

ResultsPlus
Examiner Comments

Occasionally responses would be too vague like this one which scores 0 marks.

(b) (i) State **one** factor that contributes to rapid urbanisation.

(1)

rural to urban migration for job opportunities

ResultsPlus
Examiner Comments

This response identifies two valid factors: rural-to-urban migration and job opportunities. Either factor would be creditworthy for the mark awarded. (1 mark)

Question 3(c)

As mentioned previously, in this type of question it is essential that candidates use information directly from the resource. Examiners are looking for explicit references to Figure 3a and relevant evidence drawn from the image. While the majority of candidates were able to identify the high-rise buildings shown in Figure 3a, many struggled to develop this observation into a valid suggestion about how such buildings indicate a high land value.

(c) Study Figure 3a in the Resource Booklet.

Suggest **one** piece of evidence from the photograph that suggests this area might have a high land value.

You **must** refer to the resource in your answer.

(2)

There are many high rise apartments and buildings, showing that land value is high as developers built upwards rather than buying more land

ResultsPlus
Examiner Comments

This gets 2 marks as it identifies the high-rise builds and links this to building vertically rather than horizontally due to high land prices.

Question 3(d)

The majority of candidates provide a suitable reason for people in cities not having enough food.

(d) State **one** reason some people in cities do not have enough food.

(1)

Poverty.

ResultsPlus
Examiner Comments

This response scores 1 mark.

Question 3(e)

Overall, this question has many well developed responses demonstrating clear knowledge and understanding of the reasons for the growth of suburbs in many cities. Common responses focused on high property prices, larger homes and improved transport links.

(e) Explain **two** reasons for the growth of suburbs in many cities.

(4)

1 People are moving to the urban-fringe due to the nigh air pollution in the city centre. suburban area has a better landscape with more vegetation that allow the area to less ~~popula~~ polluted.

2 People are moving to suburbs because they can't afford ~~by~~ buying houses in the city as the land value is high. They can also get bigger house with a garden with lower prices in the suburban area.

ResultsPlus
Examiner Comments

This response scores marks for 2 developed ideas, one around air pollution and the high cost of housing. (4 marks)

Question 3(f)

This question required candidates to suggest a reason why traffic congestion has led to economic losses. The majority of candidates demonstrated a sound understanding of both the economic and health impacts of congestion. Higher-scoring responses were able to explain consequences such as reduced productivity and increased respiratory issues, and importantly, made clear links between these impacts and the data presented in the figure.

(f) Study Figure 3b in the Resource Booklet.

Suggest **one** reason why traffic congestion has led to economic losses for the cities shown.

You **must** refer to the resource in your answer.

(3)

The road damage ~~is~~ In Figure 3b it tells us that New York has the highest economic losses at US$11·0bn while Miami has US$3·3bn in economic losses. This is because New York was a central business district and many people was a high population of tourist and most people would they have a lot of cars in their roads compared to Miami.

ResultsPlus
Examiner Comments

This response scores 1 mark for the use of data from figure 3b of New York having the highest economic losses.

(f) Study Figure 3b in the Resource Booklet.

Suggest **one** reason why traffic congestion has led to economic losses for the cities shown.

You **must** refer to the resource in your answer.

(3)

Traffic congestion can lead to lowered amount of economic activity, since many people would be having a hard time getting to their place of employment.

ResultsPlus
Examiner Comments

This response scores 1 mark for the idea of people having a hard time getting to work.

(f) Study Figure 3b in the Resource Booklet.

Suggest **one** reason why traffic congestion has led to economic losses for the cities shown.

You **must** refer to the resource in your answer.

(3)

The city of New York has suffered the greatest annual economic loss of US$ 11.0bn (as shown in figure 3b). This is due to the extremely high traffic in ~~the~~ the city centre, due to many workers commuting to the centre by car. This causes people to spend more time in traffic, and less time working & bringing in revenue, which causes reduction in income & profit for the company & city since people come to work & start work later due to the traffic.

ResultsPlus
Examiner Comments

This response is awarded 3 marks as it has clear reference to the resources with a developed point about the reduction in income and profit.

Question 3(g)

In this question, candidates were required to explain one advantage and one disadvantage of building on brownfield sites. Many responses were well developed and demonstrated a clear understanding of both aspects. Commonly cited advantages included the presence of existing infrastructure and proximity to a local labour force. Disadvantages frequently mentioned included the potential for land contamination and the high costs associated with clearing and preparing the site for development.

(g) Explain **one** advantage and **one** disadvantage of building on brownfield sites.

(4)

advantage

It was already built on so can be easier to transport materials.

disadvantage

Can be expensive, which can cause many people to ignore brownfield sites.

ResultsPlus
Examiner Comments

This is a vague response that demonstrates a basic understanding of the concept, referring to the land being built on and suggesting it may be expensive. However, the lack of clarity and development limits the marks awarded. 2 marks

(g) Explain **one** advantage and **one** disadvantage of building on brownfield sites.

(4)

advantage

Brownfield sites often have transportation links and ~~old~~ roads that can connect making accessability good. This would mean there is not a need to build new roads and no cost.

disadvantage

~~By~~ Brownfield sites are previously used meaning to make it look good there is usually a need to bulldoze everything. This can be costly and ~~effects~~ expensive.

ResultsPlus
Examiner Comments

Two developed points covering both an advantage and a disadvantage. 4 Marks.

Question 3(h)

This question required candidates to analyse how improvements in water disposal can benefit cities in developing countries. The resource focused on two strategies: one from Australia and one from Germany. Many candidates were able to describe these strategies and suggest how they could benefit the cities in question. However, fewer candidates were able to effectively integrate evidence from the resource with wider discussion of multi-scale strategies or provide deeper analysis of their impacts on health and the environment.

(h) Study Figure 3c in the Resource Booklet.

Analyse the benefits of improved waste disposal for cities in developed countries.

You **must** refer to the resource in your answer.

(8)

A poor waste disposal and a good waste disposal can make a large difference in the quality of life of the people living there due to hygine and visual pollution reasonings. Therefore, many cities in developed countries have different ~~sta~~ strategies to improve waste disposal in cities. In figure 3c, we can see the 'reducing household waste' in Australia and 'coffee cup reuse scheme' in Germany.

Firstly, household waste is around 20% of the total waste disposal and it ~~is the cause~~ contributes to river pollution, unhygenic streets that lead to diseases, and so on. By increasing charges for household waste disposal in ~~Australia~~ Australia, it ~~can~~ can help advertise and educate these issues to unknowing residents, ~~to that~~ to try and encourge recycling and reusing instead of ~~through~~ throwing everything away to landfills. According to figure 3c, households in Aus under this polizy are to be charge an extra AU$ 600 if they donot improve their recycling. Plastics, Tins, Food waste and even electronics can be recycled, so that old parts ~~can~~ can be remade for new ones to decrease the amount of waste in landfills and ~~improve~~ dispose as it costs almost 36.6 ~~mn~~ billion each year for increase sustainability. They can also reduced economy waste for food wastes.

Secondly, Germany has a different approach with reusing paper cups. Acordiy to figure 3c, 2.8 billion disposable coffee cups are thrown away each year. Again, their goal with the scheme is to increase the recycelig rate of the country so that they can ~~decrease~~ decrease the amount of waste found on the streets. This helps to decrease the original amount of material used to create these cups in the first place and can encourage

people to purchase their own cups and instead of throwing them away, the could reuse the cuphy giving it back to the store they perchanged to beverage in. Consequently Besides, this may also decreases the amount of & energy used and ~~as~~ released greenhouse gases as these materials are usually burnt to disintegration. It could also protect the ocean from futher harm of microplastics to the environment.

In conclution, Both countries, Austrilia and Germany are tryin to encourage residents to reuse & recycle instead of throwing them away from both economical and environmentally benefits.

ResultsPlus
Examiner Comments

The response provides a detailed discussion of both strategies, with clear and relevant links to their impacts on health, economic well-being, and the environment. 8 marks.

ResultsPlus
Examiner Tip

Candidates should be given regular opportunities to practise using resources to analyse the importance of factors or ideas, demonstrating their ability to make meaningful connections between them in order to produce evidence-informed analysis. To fully meet the requirements of the 'analyse' command word, responses should include a range of well-developed points supported by clear judgement and reasoning.

Question 5(d)iii

Question 5(d)iv

Question 5(e)

Question 6(a)

Please note that the comments that follow for question 6 (Urban Environments) also apply to question 4 (Economic Activity and Energy) and 5 (Rural Environments). Question 6 was the most popular option from section B so it makes sense to provide exemplars and commentary for this question. The questions are provided in parallel and the resources for each are similar but with a different fieldwork context.

In this paper there were a series of short response questions based on the unfamiliar fieldwork context, and an extended response question on a familiar fieldwork context. Candidates are provided space at the beginning of the familiar fieldwork context section to write the title of their enquiry. There were many candidates who provided very vague titles, or none at all.

The responses in this section show where candidates have clearly understood different aspects of their own fieldwork. It is important that candidates are able to consider different aspects of the fieldwork enquiry process and are prepared to answer questions on any of these from the design stages through to evaluation.

In this question, candidates were required to state one health and safety risk relevant to the unfamiliar fieldwork context provided. The majority of candidates were able to identify a suitable risk. However, a number of responses focused instead on methods of mitigating risk, rather than stating the risk itself, which did not meet the demands of the question.

If you answer Question 6, put a cross in the box ☒ .

6 Investigating urban environments

Study Figures 6a and 6b in the Resource Booklet. They show some information about data collection methods the students used and an extract from their questionnaire results.

> The aim of the students' enquiry was to investigate views on how people are encouraged to act more sustainably in the city centre of Porto, Portugal.

(a) State **one** health and safety risk that should have been considered for this enquiry.

(1)

Getting lost / separated from the group.

ResultsPlus
Examiner Comments

Examiner Comment: One suitable risk. 1 mark.

Question 6(b)

This question required candidates to identify one type of primary data collected by the students, as shown in Figure 6a. Nearly all candidates were able to correctly name a method, such as a questionnaire, photographs, or an environmental quality survey.

(b) Identify **one** type of primary data collected by the students.

(1)

photographs

ResultsPlus
Examiner Comments

One correct method 1 mark.

(b) Identify **one** type of primary data collected by the students.

(1)

Environmental quality survey.

ResultsPlus
Examiner Comments

One correct method 1 mark.

(b) Identify **one** type of primary data collected by the students.

(1)

Questionnaires

ResultsPlus
Examiner Comments

One correct method 1 mark.

Question 6(c)

This question required candidates to explain why systematic sampling was chosen by students to collect questionnaire responses. Many candidates provided sound explanations, highlighting the ease of implementation and the reduction of bias. Several responses also included examples to illustrate how systematic sampling operates in practice, which helped to strengthen their answers.

(c) **Explain why the students may have chosen systematic sampling for the questionnaire.**

(3)

Systematic sampling reduces bias and allows for more reliable results in the questionnaire. Students can get a clearer understanding of the views of a range of different people.

ResultsPlus
Examiner Comments

This response recognises that systematic sampling reduces bias and allows for more reliable results by capturing the views of a range of different people. (3 marks)

Question 6(d)i

In this question, candidates were required to use the data from Figure 6b to complete a pie chart. While many candidates completed the task successfully, some had difficulty accurately plotting the 5% segment, and others did not follow the key correctly when shading the segments.

(d) (i) Plot the data for Site 1, Question 3, from Figure 6b in the Resource Booklet, to complete the pie chart in Figure 6c in the Question Paper.

(2)

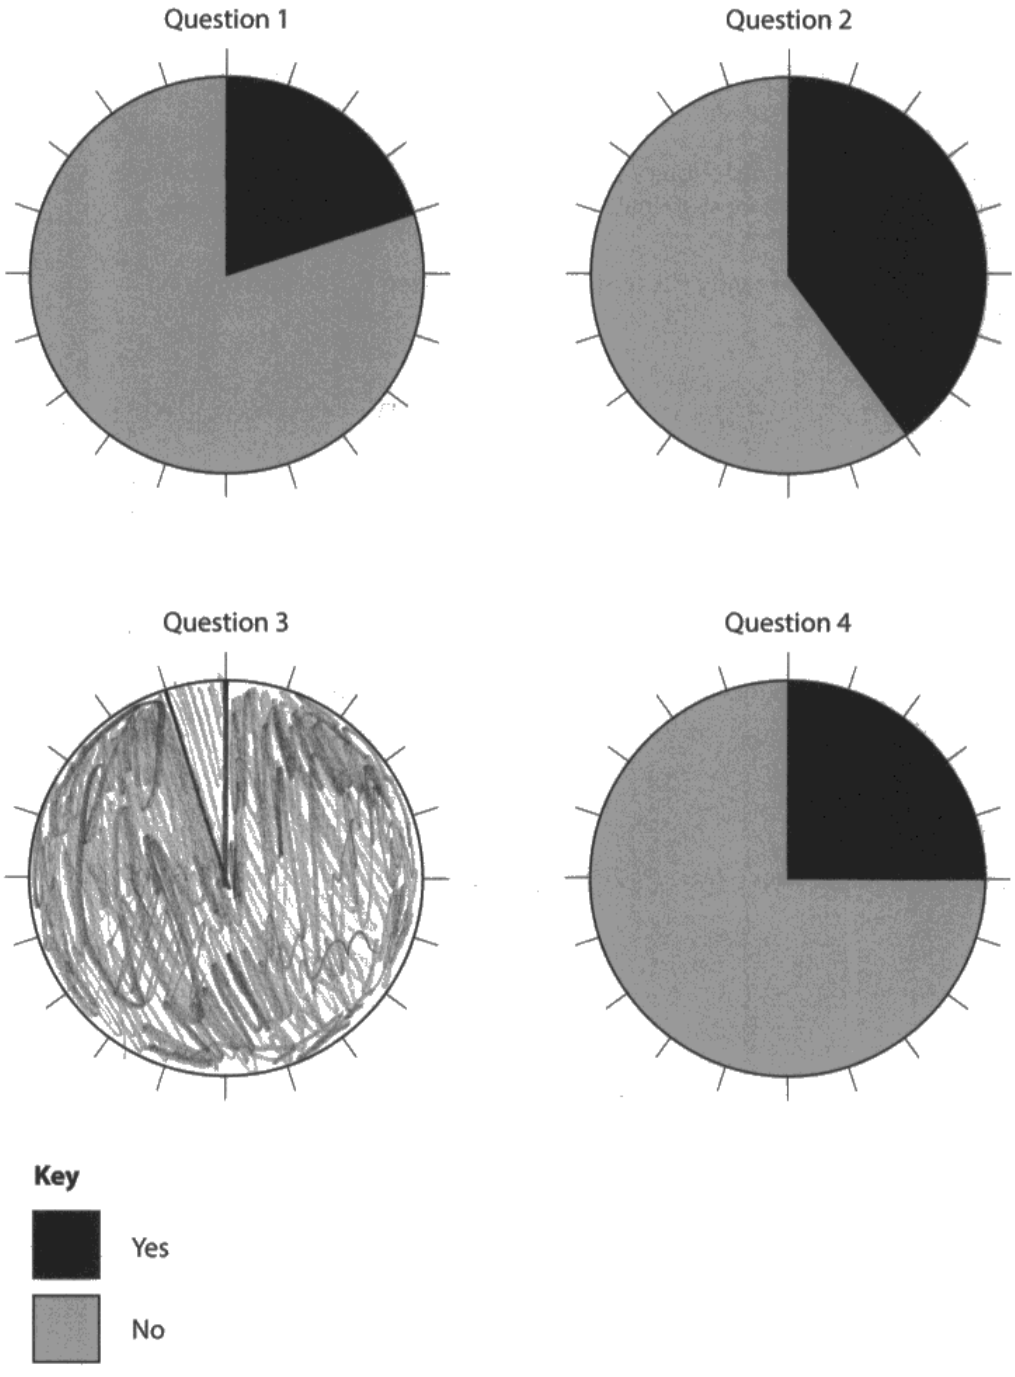

Figure 6c

Data presentation for Site 1

ResultsPlus
Examiner Comments

This response correctly plots the 5% 'No' segment, achieving the first mark. The shading is also accurate and follows the specified key, securing the second mark. (2 marks)

ResultsPlus
Examiner Tip

Candidates should regularly practise constructing a variety of data presentation techniques, including pie charts. Attention should be paid to accurately interpreting and applying keys to ensure correct shading and labelling.

Question 6(d)ii

This question required candidates to state one advantage and one disadvantage of using pie charts to display data. Most candidates successfully identified advantages, such as the ease of recognising patterns and the ability to make visual comparisons between sites. However, disadvantages were less consistently explained, with credit most commonly awarded for recognising that pie charts show percentages but not actual values.

(ii) State **one** advantage and **one** disadvantage of the data presentation method used in Figure 6c.

(2)

advantage

Easy to read and compare.

disadvantage

Does not show the exact number only percentage

ResultsPlus
Examiner Comments

This response provides one valid advantage and one valid disadvantage, meeting the requirements for full marks. (2 marks)

ResultsPlus
Examiner Tip

Candidates should be encouraged to consider both the strengths and limitations of different data presentation techniques, including how effectively they communicate specific types of information.

Question 6(d)iii

(iii) State **one other** data presentation method that could have been used for the data shown in Figure 6c.

(1)

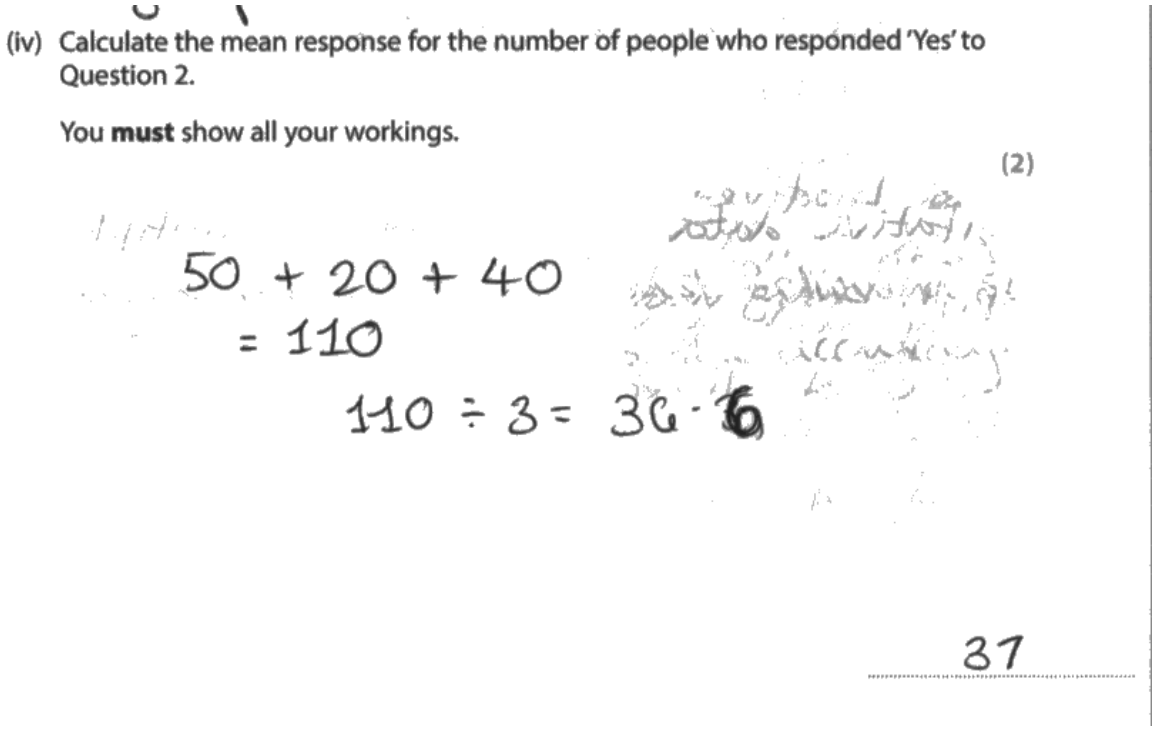

Bar graph.

ResultsPlus
Examiner Comments

A suitable alternative presentation method is identified. (1 mark)

Question 6(d)iv

This question required candidates to calculate the mean number of people who answered 'Yes' to Question 2, using the data provided in Figure 6b. The majority of candidates were able to apply the correct method, and many successfully calculated the mean, achieving full marks.

(iv) Calculate the mean response for the number of people who responded 'Yes' to Question 2.

You **must** show all your workings.

(2)

50 + 20 + 40
= 110
110 ÷ 3 = 36·6

37

ResultsPlus
Examiner Comments

Full marks awarded for the correct calculation of the mean. (2 marks)

(iv) Calculate the mean response for the number of people who responded 'Yes' to Question 2.

You **must** show all your workings.

(2)

$$\frac{20+0+80+50}{4}$$

$$= 37.5\%$$

37.5%

ResultsPlus
Examiner Comments

One mark awarded for demonstrating the correct method to calculate the mean, despite an error in the final answer. (1 mark)

Question 6(e)

This question assessed both AO3 and AO4, focusing on a familiar fieldwork context. Candidates were asked to evaluate the importance of quantitative data in reaching their own conclusions. Most demonstrated a secure understanding of what quantitative data is and how it can positively influence the reliability and clarity of a conclusion. The strongest responses provided a balanced and well supported evaluation, with clear and explicit references to the candidate's own fieldwork investigations.

(e) You have studied urban environments as part of your own geographical enquiry.

Evaluate the importance of quantitative data in helping you reach your conclusions.

(8)

State the title of your geographical enquiry

Did the development of JBR (Jumeirah beach residents) positively benefit the tourism industry in Dubai?

When considering this question, ~~the~~ our hypothesis was that the development of JBR did positively benefit the tourism industry in the UAE. We tested our hypothesis through conducting a range of primary ~~to~~ quantitive but more importantly quantative data collection methods, as well as the evaluation of ~~exclusive~~ v ~~to~~ some secondary data. We conducted our primary data collection in three different sites in JBR: Blue Water, The Walk and the beach, these were all ideal places due the accessibility to these sites but also the general safety. Our first ~~the~~ primary data collection was an EQS (Environ-mental quality survey. We did this along a 1km^2 sample area of each site and we would rate thing e.g the desirability of the ~~the~~ buildings or accessibility etc. We would then rate them between 1-5. This data collection method was very useful as it was quantitive and very easily quantifiable leading us to easily compare the results of each site. However, we had to use the same person for every place as the ratings were very subjective and to avoid any anomalies. Our second ~~the~~ primary data collection was a pedestrian/vehicle count. This was very

broken up into different groups

useful as firstly it was quantitive which allowed us to give us an accurate idea of the population density but also it allowed us to plot a bar dart meaning we could easily compare our results to other groups. However, the main problems were that we had to get to a good vantage point and count every single car/person in the which led us to the possibility of losing count. Our third primary quantitive collection method was land use grid. We used a premade grid to work the use of each building e.g commercial residential etc. We conducted it down a 1km sample size along the beach and The Walk. This gave us an idea of the use of the land which gave us very good information to come to the conclusion of our hypotheses. However, some issues were that we had very limited time meaning we couldn't write down the use of each floor of the building. We also had some risk assessments too, like heat stroke getting hit by a car and getting lost. We solved this by staying well hydrated, paying attention when crossing and having meet up points. Our final piece of quantitive data we utilised was the internet where we identified the nearest cost of land and building which gave us a great idea of the demand and costs of the land.

(Total for Question 6 = 20 marks)

TOTAL FOR SECTION B = 20 MARKS

In conclusion, quantitive data was the main front runner that led us to our conclusion that to our hypotheses being correct. This quantitive data was very important as it allowed us to compare results and it gave us a very good understand as it's all numerical.

1*

broken up into different groups e.g lorries, taxis etc

This response achieves level 3, 8 marks. There is clear evaluation of the different types of quantitative data used throughout the candidate's investigation. The response includes explicit reference to their own fieldwork in Dubai and concludes with a summary that reinforces the candidate's key ideas.

(e) You have studied urban environments as part of your own geographical enquiry.

Evaluate the importance of quantitative data in helping you reach your conclusions.

(8)

State the title of your geographical enquiry

investigating the changing use of urban areas over time.

Quantitative data was used in collecting data including number of vehicles, number of pedestrians, etc. By calculating exact numbers and data, we were able to create conclusions that weren't derived from our and other peoples interpretations. This is because, if qualitative data was used instead - such as photographs and field sketches - they would have to be compared to existing photographs on the internet. However there are many factors that may affect this such as time of day, time of year, etc that we are unable to depict ~~with~~ from simply comparing it to our primary data.

By using quantitative data, we can compare it to existing data from the internet to show how much the numbers have changed. Additionally, by collecting exact data we can see ~~that~~ the actual numbers in comparison. This also helps in data presentation to show trends that are seen. Quantitative data can be easily charted on a bar or line graph which allows us to see how the numbers have changed over time - directly addressing our geographical

enquiry

The use of quantitative data also allows for an easy data collection that isn't biased. In our investigation, by setting a timer of 2 minutes and counting the number of pedestrians and vehicles past a specific marker, we were able to collect data efficiently ~~and~~

Overall, quantitative data was important in our investigation as it gave us precise data that is easy to present and compare to secondary data.

(Total for Question 6 = 20 marks)

TOTAL FOR SECTION B = 20 MARKS

ResultsPlus
Examiner Comments

This response is largely generic, with limited reference to the candidate's own fieldwork. The points made lack depth, and the conclusion is basic and underdeveloped. Level 2 – 4 marks

ResultsPlus
Examiner Tip

Candidates should be encouraged to critically assess all aspects of their enquiry by explicitly linking their methods to the original aims and final conclusions. They should also ensure that evidence from their own data collection is used to support and justify their evaluations and reflections.

Question 7(a)ii

This question required candidates to explain one impact of deforestation. The majority of responses referred to climate change, habitat loss, or desertification. While many candidates were able to identify a valid impact, some struggled to develop their point sufficiently to access the second mark.

(ii) Explain **one** impact of deforestation.

(2)

Deforestation causes loss of habitat for animals.

ResultsPlus
Examiner Comments

1 mark for loss of habitat.

Question 7(b)i

This question required candidates to identify one labelled country with the highest number of wildfires per month, using Figure 7a. While the majority of candidates correctly identified Brazil, a small number selected other 'brown' countries from the figure that were not labelled, resulting in no credit.

(b) Study Figure 7a in the Resource Booklet.

(i) Identify **one** labelled country with the highest average wildfires per month.

(1)

RUSSI RUSSIA

ResultsPlus
Examiner Comments

Incorrect country identified. 0 marks

ResultsPlus
Examiner Tip

Candidates should be encouraged to read questions carefully and pay close attention to the wording and visual detail in figures, ensuring their responses accurately meet the question's requirements.

Question 7(b)ii

This question required candidates to describe the pattern of wildfires in South America, using Figure 7a — world map showing the global distribution of wildfires. When a question refers to a 'pattern', it is essential that candidates identify and describe a clear spatial trend. This can be achieved by referring to specific regions, clusters, or groups of at least two countries. Doing so demonstrates effective use of the resource, which is necessary to access AO3 marks. Some candidates' responses were not creditworthy as they failed to identify a viable pattern, instead offering isolated or vague observations.

(ii) Describe the pattern of wildfires in South America.

You **must** refer to the resource in your answer.

(2)

Fig 7a shows that the eastern regions of South America recieve more wildfires compared to the western regions. for instance, Brazil experiences >1000 (Fig 7a), while Colombia experiences <500 (Fig 7a)

ResultsPlus
Examiner Comments

The first mark is given for the identification of the pattern, "eastern regions receive more wildfires". The second mark is given for the use of the data from figure 7a, Brazil experiences more than 1,000 wildfires. 2 marks.

ResultsPlus
Examiner Tip

World maps are frequently used in examinations so it's a good idea for candidates to be able to recognise how to interpret patterns, trends, differences and similarities in such resources.

Question 7(b)iii

This question required candidates to suggest one reason for the pattern shown in Figure 7a. As with all 'suggest' questions based on a resource, candidates needed to both identify a pattern and provide a reason for that pattern. Some responses achieved one mark by identifying either the pattern or a plausible reason, but not both. Stronger responses referred to factors such as proximity to the equator, low rainfall areas, or human activities like deforestation through slash-and-burn techniques.

(iii) Suggest **one** reason for the pattern shown.

You **must** refer to the resource in your answer.

(2)

Brazil is close to the equator, meaning there is a high amount of rainforests, like the Amazon, this means there is more deforestation, more logging means there is less moisture, increasing chances of wildfires, thus the figure shows that they experience over 1000 fires a month.

ResultsPlus
Examiner Comments

The first mark is given for the identification of the pattern, "Amazon Rainforest". The second mark is given for the reason, more logging means there is less moisture increasing chances of wildfires. 2 marks.

(iii) Suggest **one** reason for the pattern shown.

You **must** refer to the resource in your answer.

(2)

This is because large are as rainforest fires spread rapidly from tree to tree and are hard to stop as a result leading to wild fires.

ResultsPlus
Examiner Comments

1 mark for reason; large areas of rainforest fires spread rapidly from tree to tree. There is no pattern for the second mark.

Question 7(b)iv

This question required candidates to suggest one additional piece of evidence that could be used alongside Figure 7a to help understand the impacts of climate change. A number of candidates misinterpreted the question, with some describing different global wildfire patterns or providing

further reasons for wildfires rather than suggesting additional evidence. Those who answered correctly typically identified relevant evidence such as changes in temperature over time or carbon dioxide levels, both of which could be used to support analysis of climate change impacts.

(iv) Suggest **one other** piece of evidence that could be used with Figure 7a to understand the impacts of climate change.

(2)

The mean ~~Average~~ temperature increase of surface temperature globally, so that it can be assessed to what extent, or rising temperatures and a warming climate affecting the occurence of wildfires.

ResultsPlus Examiner Comments

This response gives a developed example of a piece of evidence for 2 marks.

Question 7(c)

This question required candidates to state one human and one natural cause of climate change. The majority of candidates were able to identify a human cause with confidence, such as the burning of fossil fuels. However, fewer candidates demonstrated a secure understanding of natural causes, with some struggling to provide an appropriate physical explanation.

(c) State **one** human and **one** natural cause of climate change.

(2)

human

Deforestation

natural

ice caps melting

ResultsPlus Examiner Comments

1 Mark for the correct identification of one human cause.

(c) State **one** human and **one** natural cause of climate change.

(2)

human

burning fossil fuels

natural

cows producing methane gas

ResultsPlus
Examiner Comments

1 mark awarded for the correct identification of a human cause of climate change.

ResultsPlus
Examiner Tip

A common misconception observed was the classification of cattle farming as a natural cause. Candidates should be explicitly taught that cattle farming is a human activity contributing to climate change, primarily through methane emissions, and should not be confused with natural processes.

(c) State **one** human and **one** natural cause of climate change.

(2)

human

Burning fossil fuels

natural

The Milankovich cycle

ResultsPlus
Examiner Comments

2 Marks for the correct identification of one human and natural cause of climate change.

Question 7(d)

This question required candidates to explain two ways in which governments can respond to climate change. Many candidates produced well developed responses, demonstrating a strong knowledge and understanding of relevant strategies. Commonly cited responses included reference to international agreements such as the Paris Agreement, national commitments to Net Zero targets, and the promotion or investment in renewable energy sources.

(d) Explain **two** ways that governments can respond to climate change.

(4)

1 Governments can put out stricter policies / rules / laws to ~~enforce~~ enforce ways like decreased logging to decrease the rate of illegal chopping of trees, especially in places with fragile environments like rainforests.

2 Governments can establish goals to reduce the emissions of greenhouse gases and instead opt for investments in sustainable energy sources like more wind and solar panel farms.

ResultsPlus
Examiner Comments

This response includes two relevant strategies 4 Marks.

Question 7(e)

The command word in this question is 'assess', which requires candidates to make a judgement—in this case, about the role of agriculture as a cause of desertification. While candidates are not expected to address every aspect of the resource, they are required to use it effectively to support their argument.

Lower-level responses tended to offer brief comments on each part of the resource without developing a clear line of reasoning. In contrast, higher-level responses demonstrated a well supported judgement, evaluating the extent to which agriculture contributes to desertification and often comparing it to other contributing factors.

(e) Study Figure 7b in the Resource Booklet.

Assess the role of agriculture as a cause of desertification.

You **must** refer to the resource in your answer.

(6)

Desertification is becoming a serious problem in many countries around the world. One of the factors that ~~of~~ cause desertification is agriculture. People often destroy the habitats for agriculture by setting forests on fire. This ~~leaves~~ leads to biodiversity loss of the ~~area~~. Agriculture requires a lot of water, so overtime the water available in the area decreases and the soil dries. Agriculture also has a negative impact on the soil. Intensive agriculture results in the nutritions top soil being overused, as shown in Figure 7b. If the top soil is gone farmers can no longer use the land and has to abandon it, A good example is the dust bowl in the U.S. The land could no longer be used so in turned into a land filled with sand and ~~sand~~ dust storms. There are other factors affecting desertification too, ~~like~~ as shown in Figure 7b. Climate change is another big factor of desertification. Extreme wether events like drought, and increased CO_2 in the air leads to desertification. However because agriculture has more direct impact on the land it is the biggest contributing factor of desertification

ResultsPlus
Examiner Comments

This response explores the role of agriculture in causing desertification and effectively contrasts it with the impact of climate change. The candidate concludes with a clear assessment, making a reasoned judgement about which factor has the most direct impact on desertification. 6 marks.

ResultsPlus
Examiner Tip

Greater familiarity with the 'assess' command word is strongly recommended for future examinations. Candidates may find it helpful to begin their answers with a clear judgement or assessment, followed by supporting evidence drawn from the resource and their own knowledge. This approach can help ensure responses are focused and well structured.

Question 7(f)

This question features the command word 'discuss' and assesses AO2, AO3, and AO4. Candidates are required to assimilate the specific resources referenced in the question and explore the issue by weighing arguments for and against the statement (agree vs. disagree). The question clearly specifies which resources must be used. To achieve the highest marks, candidates need to integrate evidence from both resources effectively. Additionally, it is crucial that candidates supplement the resources with their own knowledge and understanding to develop a well supported and balanced response.

Candidates are required to use figures 7a and 7b to discuss the view: "climate change is the greatest threat to fragile environments." Most candidates agreed with the view, demonstrating good understanding of the interrelated nature of climate change impacts and recognising that other threats such as deforestation and desertification were linked to climate change.

There were a lot of strong responses to the question which demonstrated good AO3 and AO4 but sometimes lacked AO2.

(f) Discuss the view:

"Climate change is the greatest threat to fragile environments."

Use Figures 7a and 7b from the Resource Booklet, and your own knowledge and understanding to support your answer.

You **must** refer to the resources in your answer.

Figure
SAS { Tuvalu, Solomon Islands
Sahara

(12)

Climate change is a long term impact that affects the weather, temperature, and global environments. Fragile environments are that of environments that are vulnerable and at risk of destruction. ~~an~~ Climate change is indeed the greatest threat to fragile environments as they speed up processes like desertification & deforestation due to extreme temperature changes and unpredictable extreme weather events. caused by both natural and human reasons

Firstly, according to figure 7a and 7b, we are shown the rate of wildfires and some information on desertification. Fragile environments like ~~two~~ the amazon rainforest in Brazil and the Sahara Desert suffer insensley from ~~these two~~ ~~desertif~~ deforestation and desertification, the most as Brazil has chopped almost 1/3 of its rainforest for economical development and agriculture. When the temperature continues to increase, the ~~Sahara~~ Sahal will be even more inhabitable for humans and other organisms as the temperature would skyrocket. wildfires are also easier to start, considerly dry and lot ~~from~~ climate that increases rates of fire forming.

Secondly, sea level rising and increased sea temperatures are great threats to environments like Tuvalu, Solomon Islands and the Great barrier reef. They all suffer from climate change due to the increased temperature, which lead to sea levels rising due to the ice caps ~~and~~, ice sheets and glaciers melting in areas like Greenland

increasing vulnerability of lowlaying islands.
and Antartica, causing the sea level to rise rapidly. Solomen Islands
has already lost 5 small islands that submerged under the ocean
as the sea level continues to increase. As for the great barrier reef in Australia, the
increase in sea temperature caused a lot of ~~d~~ ~~t~~ corals to suffer
from bleeching as they ~~are no~~ don't grow well in ~~the~~ hot ocean waters.
This leads to a decrease in biodiversity as animals habitats are being
destroyed.

In conclution, climate change is a big threat to environments that
are fragile, especially due to rising temperatures and unpredictable, extreme
weather events in all corners of the world, this may lead to
a ~~desa~~ disaster if people and countries leaders don't act soon.

*: Increase in extreme weather events shown in figure 7b make it harder
to implement ~~deada~~ strategies like afforestation, due to the fact the plants,
even replanted, couldn't survive the extreme weathers of the environment,
which is why the situation is seemingly becoming more dire.

(Total for Question 7 = 35 marks)

Wildfires surrounding areas like Brazil, Madagascar, India, (Areas having ~~cercles~~
intensifies the impacts of desertification as more wildfires lead to
more vegetation loss, ~~more~~ leading to bare soils with more vulnerability
to soil erosion, increasing the area of the fragile environment itself.

around 500-1000 and more wildfires)

This response meets the criteria for Level 3 and is awarded 12 marks. The candidate demonstrates a clear understanding of how climate change threatens fragile environments by critically evaluating both resources. Additionally, the candidate effectively incorporates their own knowledge, which supports a well reasoned and balanced judgement.

It is important that a clear judgement is made. This is usually provided with a summary at the end of the response.

(f) Discuss the view:

"Climate change is the greatest threat to fragile environments."

Use Figures 7a and 7b from the Resource Booklet, and your own knowledge and understanding to support your answer.

You **must** refer to the resources in your answer.

(12)

In this ~~para~~ infograph ~~paragraph~~ I am going to discuss the view "Climate change is the greatest threat to fragile environment"

Climate change is a threat to fragile environment because, climate change leads to global warming which increases deinger to fragile environment like forests, mangrove and coral reefs. Climate change refers to change in weather, temperate over a period of time and fragile environment refers to ecosystem which are sensitive and will not recover if damaged. So global warming causes the sun to release more heat which causes fragile environment to die since they are used to a specific temperature, like mangroves and corals only survive in 23°C. If not they loose nutriests and erode. In figure 7a ~~and 7b~~ countries with a lot of fragile environment like Brazil and Finland ~~have~~ have the most wildfires and wild fires occur due to high temperature, and the ecosystem can't survive. In 7b the image shows that the sun's heat is directly applying to

the soil and the soil is cracked and eroded. therefore this all proves that Climate change is a threat to fragile environment.

However, Climate change doesn't affect all countries since most country have reserves and equipment to prevent this, in figure 7a ~~developed countries like USA, Canada~~ countries like Egypt and Mongolia have really less wild fires so this suggests that they have ways to protect ther environment and ecosystem from climate change and high temp from wild fires.

Over all, climate change affects fragile environment however we need to have stratigies to prevent it from of affecting our ecosystem that's fragile.

(Total for Question 7 = 35 marks)

ResultsPlus
Examiner Comments

This response is awarded Level 2, 5 marks. While both figures are referenced, their use is limited in depth and unbalanced. Candidates must go beyond simple referencing or 'lifting' information from the resources. The response would benefit from a broader range of discussion points and more effective integration of the resources to support and develop ideas.

Question 8(a)iii

Question 8(b)i

Question 8(b)ii

This question required candidates to describe the pattern of emigration for Asia, using Figure 8a—a world map showing the total number of emigrants per donor country. When a question refers to a 'pattern', it is essential that candidates identify and describe a clear spatial trend. This can be achieved by referring to specific regions, clusters, or groups of at least two countries. Doing so demonstrates effective use of the resource, which is necessary to access AO3 marks. Some candidates' responses were not creditworthy as they failed to identify a viable pattern, instead offering isolated or vague observations.

(ii) Describe the pattern of emigration for Asia.

You **must** refer to the resource in your answer.

(2)

In Asia, the same shows us the most countries with highest emigration rates (such as China, India) are located here where only one is outside of Asia with it being Mexico.

ResultsPlus
Examiner Comments

This response is awarded 1 mark for identifying the general pattern that China and India have the highest emigration rates. To achieve full marks, the candidate would have needed to support this observation with specific data from the resource.

ResultsPlus
Examiner Tip

Candidates should be given regular opportunities to practise identifying trends and patterns from a variety of stimulus materials, including maps and graphs. They should be encouraged to support their observations with specific data from the resource to strengthen their responses and access higher-level marks.

Question 8(b)iii

This question required candidates to suggest one reason for the pattern shown in Figure 8a. As with all 'suggest' questions based on a resource, candidates were expected to both identify a clear pattern and provide a reason for that pattern. Some responses achieved one mark by addressing only one element—either the pattern or a plausible reason. Stronger responses demonstrated a more complete understanding by linking emigration patterns to issues such as skills gaps and brain drain in the donor countries. Others offered a more positive interpretation, referencing the role of remittances being sent back home.

(iii) Suggest **one** possible impact of the emigration pattern shown for donor countries.

You **must** refer to the resource in your answer.

(2)

loss of skilled workers, and ~~this~~ reduced pressure on health and education services, which can result in the decline of the donor ~~country~~ country's economy.

ResultsPlus
Examiner Comments

This response is awarded 1 mark for identifying the impact of a loss of skilled workers. To achieve full marks, the candidate would have needed to identify a pattern from the resource.

Question 8(b)iv

This question required candidates to suggest one reason why the emigration pattern shown is an important factor in the growth of the global economy. Many candidates were able to identify a valid point, such as the filling of skills gaps in host countries, which was typically awarded one mark. However, few candidates developed their ideas fully to explain how this contributes to the growth of the global economy, which was necessary to access the second mark. This highlights the need for greater focus on linking individual impacts to wider global processes in extended reasoning.

(iv) Suggest **one** reason why this emigration pattern is an important factor for the growth of the global economy.

(2)

emigrants migrate to countries which need workers to fill this employment gap in the reciving country leading to more stable global economy and growth.

ResultsPlus
Examiner Comments

This response gives a developed example of a reason for the growth of the global economy. 2 marks.

Question 8(c)

This question required candidates to state two push factors for migration. The majority of candidates were able to correctly identify two valid factors and achieved full marks. The most frequently cited responses included war, famine, and lack of job opportunities.

(c) State **two** push factors for migration.

(2)

1 Lack of job opportunities

2 Poor healthcare access.

ResultsPlus
Examiner Comments

This response is awarded 2 marks for two correct push factors.

(c) State **two** push factors for migration.

(2)

1 people often migrate due to more job opportunities which can help them financially.

2 another reason is quality of life, where they currently live won't up to standard so they migrate.

ResultsPlus
Examiner Comments

This response is awarded 1 mark for identifying the lack of job opportunities. However, the second point referring to "quality of life" is too vague to gain credit, as it is not clearly developed or supported.

ResultsPlus
Examiner Tip

Candidates should avoid using broad or vague terms such as "quality of life" without further explanation. While it is a valid concept, it must be clearly defined or broken down into specific aspects—such as access to healthcare, education, employment, or housing—to gain credit. Vague references to improved or reduced quality of life are unlikely to meet the level of detail required for higher marks unless supported by clear examples or further development.

Question 8(d)

This question required candidates to explain two economic benefits of globalisation. Many responses were well developed, with particular focus on cost reduction through manufacturing in developing or emerging countries. However, some candidates found it more challenging to fully develop their points. As with other 4-mark 'explain' questions, it is essential that candidates extend their answers beyond simple statements by clearly explaining the reasoning or consequences in order to access full marks.

(d) Explain **two** economic benefits of globalisation.

(4)

1 Globalisation allows countries to become more developed economically due to TNCs and spread of foreign investments around the world, allowing the growth of global economy.

2 Globalisation allows trade and communication between countries which is aided by ~~to~~ modern transport which shortens the distance between countries and opens global market for countries to benefit from.

ResultsPlus
Examiner Comments

This response provides two developed economic benefits for 4 marks.

Question 8(e)

As in the previous 6 marks in section C, the command word 'assess' is one that a very large number of candidates have difficulty in understanding what exactly it is they are meant to do. In the specification this is defined as: 'Use evidence to determine the relative significance of something. Give consideration to all factors and identify which are the most important.' In other words, candidates are required to rank and/or make a judgement.

This question focused on the role of global institutions, such as the World Trade Organization (WTO), in influencing global trade. Lower-level responses often took the form of a list, with brief, undeveloped comments on the functions of these institutions. While such responses could gain some credit, they lacked the depth and assessment required for higher-level marks. In contrast, the most effective responses began with a clear judgement, selected a limited number of institutional functions to explore in detail, and provided justification as to whether global institutions play the most significant role in global trade. Well structured responses that maintained a clear line of reasoning throughout were more likely to achieve the highest level marks.

(e) Study Figure 8b in the Resource Booklet.

Assess the role of global institutions, such as the World Trade Organization (WTO), in affecting global trade.

You **must** refer to the resource in your answer.

(6)

The World Trade Organization (WTO) is located in switzerland which means the costs may be high since Switzerland is a HIC. WTO was established on 1st January 1995 and it ~~provided~~ has almost ~~all~~ all countries (164) working with them which meant that they are successful. They provide functions such as ~~to~~ managing WTO agreements, forum for trade negotiations, handling trade disputes, monitoring national trade policies, assistance and training for developing countries, cooperation with other international organisations. This means that countries that are developing can also get assistance and more. This shows that the World Trade Organization provides many functions that not only benefit them but other countries.

ResultsPlus
Examiner Comments

This candidate has written briefly about several functions of the WTO from the resource, but with no clear development or assessment so remains in level 1 (3 marks).

Question 8(f)

This question features the command word 'discuss' and assesses AO2, AO3, and AO4. Candidates are required to assimilate the specific resources referenced in the question and explore the issue by weighing arguments for and against the statement (agree vs. disagree). The question clearly specifies which resources must be used. To achieve the highest marks, candidates need to integrate evidence from both resources effectively. Additionally, it is crucial that candidates supplement the resources with their own knowledge and understanding to develop a well supported and balanced response.

In this question, candidates were required to use Figures 8a and 8b to discuss the view: "Foreign investment is one of the greatest drivers of the global economy." Most candidates supported the view, drawing on ideas related to transnational corporations (TNCs), migration, and global institutions, as these themes were reflected in the stimulus material. Stronger responses demonstrated the ability to integrate evidence from both figures with their own knowledge, while also considering alternative perspectives or the relative importance of other drivers in the global economy.

There were a lot of strong responses to the question which demonstrated good AO3 and AO4 but sometimes lacked AO2.

(f) Discuss the view:

"Foreign investment is one of the greatest drivers of the global economy."

Use Figures 8a and 8b from the Resource Booklet, and your own knowledge and understanding to support your answer.

You **must** refer to the resources in your answer.

(12)

Foreign investment is when foreigners are investing in the economy of another country or imports and exports are becoming easier due to global institutions like NTO, UN, etc.

By more migration, emigrants start working in another country as there are better job opportunities. This causes the economy of destination country to flourish and, if they send remittances back, it can lead to the economy of the origin country also flourishing. Figure 8a shows the total number of emigrants (people moving from origin country) per donor country in 2020. In countries like China, Russia, India, Mexico and South Korea, many emigrants (over 50 million) are leaving donor countries for different reasons, however the most significant reason is job opportunities. However, if the emigrants dont pay remmitances back home, it can lead to brain drain, which can affect the global economy drastically. The amount of emigrants in Africa are less as they may not have improved transport which is also a factor affecting global economy apart from foreign investment.

By more trade due to improvements in Globalization which

is the interconnectedness and interdependency of countries due to improvements in technology, trade, and communication. This has made it easier to trade. Figure 8b shows a global institution, The WTO's fact file. It shows that the foreign investment is not the only most significant factor to drive the global economy, trade is also a major driver of the increase in global economy. As the WTO and other organisations like the EU as a trading bloc, has helped lift tariffs and barriers and quotas, making it easier Trade goods between countries. The WTO also handles trade disputes as shown in Figure 8b, helping the global economy flourish

Overall, foreign investment is a major drives of the global economy, however, in my opinion, Trade is more significant as goods going through a commodity chain has improved the global economy and making the world more financially stable.

Examiner Comments

This a level 3 (11 marks) response that shows good understanding of concepts and interrelationships in the geography. They deconstruct ideas across resources with explicit use of data and evidence. There is also a clear conclusion. There is some AO2 present, but this could have been stronger which prevents it from reaching full marks.

(f) Discuss the view:

"Foreign investment is one of the greatest drivers of the global economy."

Use Figures 8a and 8b from the Resource Booklet, and your own knowledge and understanding to support your answer.

You **must** refer to the resources in your answer.

(12)

- Foreign investments help companies grow with more support, this slowly benefits the economy as the companies continue to grow.
- Foreign investments can also help small start-ups and with time and support transform into big companies and businesses.
- Foreign investments also help globalisation to occur which strengthens the relations of nations.
- Foreign investments in field such as manufacturing can be significantly ~~benefit~~ benefit countries and help them reduce labour costs and manufacturing costs.

- Figure 8a shows that Asia has the largest number of emigrants per donor country.
- Figure 8b shows WTO which ensures fair trade between nations thus promoting globalisation.
- Figure 8b suggests that WTO helps developing countries with funds and foreign investment.
- Figure 8b shows that WTO also monitors national trade policies.

ResultsPlus
Examiner Comments

This is a Level 1 response, awarded 4 marks. The candidate makes simple observations about Figures 8a and 8b, alongside basic points about foreign investment. There is limited development or evaluation, and the response lacks a clear line of reasoning.

ResultsPlus
Examiner Tip

Candidates should practise producing balanced responses to extended questions, ensuring they consider multiple viewpoints and provide material for effective discussion. To strengthen their answers, candidates should be encouraged to read more widely around the specification content, using sources such as newspapers, magazines, and reputable online articles to deepen their contextual understanding. In addition, candidates should focus on developing their ability to demonstrate their own knowledge and understanding (AO2) alongside their use of source material. This is particularly important in longer extended response questions where synthesis of ideas and reasoned judgement are required to access the higher mark levels.

Question 9(a)ii

Question 9(b)i

Question 9(b)ii

This question required candidates to describe the pattern of food security in North America, using Figure 9a—a world map showing global food security index. When a question refers to a 'pattern', it is essential that candidates identify and describe a clear spatial trend. This can be achieved by referring to specific regions, clusters, or groups of at least two countries. Doing so demonstrates effective use of the resource, which is necessary to access AO3 marks. Some candidates' responses were not creditworthy as they failed to identify a viable pattern, instead offering isolated or vague observations.

(ii) Describe the pattern of food security in North America.

You **must** refer to the resource in your answer.

(2)

The USA and Canada has high good security compared to Mexico which has slightly lower good security between 61-86 compared to 81-100 for the US and Canada.

ResultsPlus
Examiner Comments

This response is awarded 2 marks. One mark for identifying the pattern of USA and Canada having a 'high good security' and the second mark for the data from the resource, 81-100.

Question 9(b)iii

This question required candidates to suggest one reason for the pattern shown in Figure 9a. As with all 'suggest' questions based on a resource, candidates were expected to identify a clear pattern and provide a justified reason for it. Some responses gained one mark by addressing only one aspect—either the pattern or a plausible reason. Stronger responses showed a more complete understanding by linking the level of development in a country to increased access to and affordability of food, effectively explaining the observed pattern.

(iii) Suggest **one** reason for the pattern of food security shown.

You **must** refer to the resource in your answer.

(2)

Canada and USA have higher food security since they are more developed countries with higher GDP per capita meaning people are able to afford and access food compared to the emerging countries.

ResultsPlus
Examiner Comments

This response is awarded 2 marks for identifying the pattern and giving a reason for this pattern.

Question 9(b)iv

This question required candidates to suggest one way in which the pattern of food security could affect human welfare. The majority of candidates were able to provide developed responses, most commonly focusing on the impacts of malnutrition. These responses often made effective links between limited food access and consequences such as poor health, reduced life expectancy, and decreased productivity.

security and development.

(iv) Suggest **one** way the pattern of food security shown could affect human welfare.

(2)

Lower food security increases death rate and infant mortality, and decreases life expectancy, lowering human welfare

ResultsPlus
Examiner Comments

This response gives a developed example of how food security can impact human welfare. 2 marks.

Question 9(c)

Question 9(d)

This question required candidates to explain two reasons why population structure changes as a country becomes more developed. The majority of candidates answered this question well, demonstrating a sound understanding of the key factors contributing to declining birth and death rates. Stronger responses made clear links to improvements in healthcare, education—particularly for women—and access to family planning, showing how these factors influence population structure over time.

(d) Explain **two** reasons why population structure changes as a country becomes more developed.

(4)

1 Ageing /elder population increases due to a greater quality and access to healthcare/medical services to increase life expectancy.

2 ~~increase in population due to a steady birth rate and a decreasing death rate as a result of~~ less birth rates ~~and~~ but still low death rates (due to healthcare) ~~which~~ meaning less younger people born due to knowledge of contraception as well as women working and the want for smaller families.

ResultsPlus
Examiner Comments

This response provides two developed reasons for the changes in population structure. 4 marks.

Question 9(e)

As in the previous 6 mark question in section C, the command word 'assess' is one that a very large number of candidates have difficulty in understanding what exactly it is they are meant to do. In the specification this is defined as: 'Use evidence to determine the relative significance of something. Give consideration to all factors and identify which are the most important'. In other words, candidates are required to rank and/or make a judgement.

This question focused on how the human and physical factors shown in Figure 9b have contributed to uneven development. Many candidates demonstrated a good understanding of the different factors involved. The most effective responses began with a clear, well reasoned judgement and revisited this in the conclusion, resulting in a well structured and cohesive answer. Some candidates also approached the question by categorising the factors into human and physical causes of uneven development—an approach that proved effective when accompanied by clear explanation and evaluation.

(e) Study Figure 9b in the Resource Booklet.

Assess the factors that have led to patterns of uneven development within countries.

You **must** refer to the resource in your answer.

(6)

Figure 9b shows physical factors such as natural resources leading to uneven development. This is because access to natural resources means areas can be more self-sufficient than others using their resources to build and trade with other countries, allowing them to have more finance to reinvest into developing their education system. The figure mentions mountains and deserts as they isolate areas in the country, making it hard to trade, and receive resources. This means that they will lack the funds and resources to develop their area, therefore stunting their development.

Figure 9b, shows human factors, such as education. Access and quality of education is important, because if people are uneducated, they are unable to get jobs and will work in the informal sector. Similarly limited employment opportunities means people will work in the informal economy, where they do not pay tax. This leads to less of the population paying the economy tax, therefore meaning the government will lacks the funds necessary to invest into education, stunting their development.

ResultsPlus
Examiner Comments

This candidate has assessed both physical and human factors contributing to uneven development. There is clear development of two main ideas. However, the response lacks an explicit overall assessment or judgement, which limits it to the middle of Level 2. (5 marks)

(e) Study Figure 9b in the Resource Booklet.

Assess the factors that have led to patterns of uneven development within countries.

You **must** refer to the resource in your answer.

(6)

uneven development can happen due to multiple factors. we have split those 2 factors into Physical and Human.

Human factors include things like employement opportunities and education. Education can lead to uneven development because of the faet more dereloped countries have better education than under developed countries.

Physical Factors include natural resources and Mountains and ~~desser~~ deserts. The ~~Gss~~ accesibility to natural resources can affect uneven development patterns as if you have access to natural resources you can provide more goods and servees making you more dereloped.

ResultsPlus
Examiner Comments

This response largely 'lifts' information directly from Figure 9b and offers only simple, undeveloped comments. There is little evidence of interpretation or explanation beyond the resource. Level 1, 2 marks.

Question 9(f)

This question features the command word 'discuss' and assesses AO2, AO3, and AO4. Candidates are required to assimilate the specific resources referenced in the question and explore the issue by weighing arguments for and against the statement (agree vs. disagree). The question clearly specifies which resources must be used. To achieve the highest marks, candidates need to integrate evidence from both resources effectively. Additionally, it is crucial that candidates supplement the resources with their own knowledge and understanding to develop a well supported and balanced response.

In this question, candidates were required to use Figures 9a and 9b to discuss the view: "The best way to promote economic development is by supporting education." Most candidates supported the statement, drawing on themes from the stimulus material such as food security and the natural and human factors contributing to uneven development. Stronger responses successfully integrated evidence from both figures alongside their own knowledge, demonstrating thoughtful evaluation. While many responses showed strong AO3 (interpretation and analysis) and AO4 (application of skills), some lacked sufficient AO2 (knowledge and understanding), which limited access to the highest levels.

(f) Discuss the view:

"The best way to promote economic development is by supporting education."

Use Figures 9a and 9b from the Resource Booklet, and your own knowledge and understanding to support your answer.

You **must** refer to the resources in your answer.

(12)

Education plays a huge role in development. Without it, people would not be able to get high-skill, high-paying jobs that boost the economy and aid sectoral shifts.

As shown in figure 9b, education is one of four factors contributing to uneven development within countries. I believe it also affects global uneven development. For instance, in the USA, there are a plethora of top universities and schools for society to learn new skills to use in the future. Because of this, the USA is able to develop new innovative technology, shifting some jobs into the quartemary sector of the economy. In contrast, a lack of educational facilities in Botswana means that there is little room for skill development, and therefore less people in high-skill, high-paying jobs, making it difficult for the government to then tax their income to develop infrastructure such as schools to begin with. This leads to uneven development globally. However, financial aid from wealthier countries can help overcome this. For example, Microsoft donated about 1.2 million laptops to schools in regions of Africa to support education. This helped to boost skills over time, allowing more people to get higher-skilled jobs in coding / computing and developing the economy.

While education is an important factor, it is not the only one supporting economic growth. As shown in figure 9a, there are many countries globally with food security indexes (FSI), of 0-60, especially in Middle Africa, Southern Asia, and South America. Given that the FSI measures affordability, availability, and quality of food (fig 9a), I believe that food security leads to economic growth. Without food security, the access to safe and nutritional food, mortality and malnutrition rates skyrocket, affecting people's ability to go to school in the first place / work. Therefore, they struggle to make an income, hindering economic growth, leading to global uneven development.

In conclusion, education is a very good way to promote development, however, it is not the only way. Food security and access to nutrition plays a huge part too, and good security / access promotes economic development just as much.

(Total for Question 9 = 35 marks)

Examiner Comments

This a level 3 (11 marks) response that shows good understanding of concepts and interrelationships in the geography. They deconstruct ideas across resources with explicit use of data and evidence. There is also a clear conclusion. There is some AO2 present but this could have been stronger which prevents it from reaching full marks.

(f) Discuss the view:

"The best way to promote economic development is by supporting education."

Use Figures 9a and 9b from the Resource Booklet, and your own knowledge and understanding to support your answer.

You **must** refer to the resources in your answer.

(12)

I agree with this view to an extent. The root of economic development is usually education. Countries ~~wh~~ which provide higher education like the US have better economic development. This is because education opens greater pathways such as well paying jobs. Which significantly contributes to economic development. Countries like madagascar who have poor literacy rates have poor economic development.

However, some physical factors can contribute to a countries economic development. An access to natural resources can heavily contribute to a countries economic development, as the primary and secondary sector of employment is still relied on in countries such as china. Manufacturing and consumption of raw materials can improve a countries economy. For example the middle east has wide access to oil which is a great part of their economy.

To conclude, I think education is a reliable source which will gaurantee a good economy for a

country.

ResultsPlus
Examiner Comments

This is a Level 2 response, awarded 6 marks. The candidate presents developed ideas around education and natural resources and includes a clear judgement. However, the response only makes use of one figure (Figure 9b), which limits the level of resource integration required for Level 3. To access a higher level, both figures need to be effectively incorporated into the discussion.

ResultsPlus
Examiner Tip

Candidates should practise blending their own knowledge with unfamiliar resources provided in the exam. In longer extended responses, the ability to engage in analytical discussion is crucial for accessing higher levels. Although this is typically the final question on the paper, it carries a high tariff, so candidates should be encouraged to plan and attempt it thoroughly, rather than overlooking it due to time pressure.

Paper Summary

Based on their performance on this paper, candidates are offered the following advice:

When answering the extended response questions, ensure you are clear about the requirements for different command words such as 'analyse', 'evaluate', 'assess' or ‘discuss’. 'analyse' - investigate an issue by breaking it down into different components and making logical, evidence-based connections between these components.

'evaluate' - measure the value or success of something, and ultimately, provide a substantiated judgement or conclusion.

'assess' - evidence to determine the relative significance of something, considering all factors and identifying which are the most important.

'discuss' - explore the strengths and weaknesses of different sides of an issue/statement or question through reasoning and argument.

Appreciate that the extended writing questions 6, 8 and 12 marks are dominated by AO2, A03 and AO4. Poorly balanced responses that concentrate on one of the AOs, or on AO1, in general will be confined to level 1 or low-level 2. You would benefit from practising this type of question from the beginning of the course.

In the 12 mark extended response question in section C it is important to remember there are AO2 marks, which require your own knowledge and understanding to be demonstrated as well as clear interpretation of the resources.

Remember that while the extended response questions do not require a concluding paragraph, this is often the most effective way for you to demonstrate that you have met the command word, particularly where a judgement is required.

Make good use of the resources, particularly in the extended response questions. It is important in the lower tariff questions where there is a resource related to the question that it is referred to, in some form, where required. It is important that evidence from the resource is used to answer the question as these are targeting AO3 (application of knowledge and understanding).

Consider the number of marks awarded for each question to determine how much you need to develop your ideas. A 2 mark 'describe' question requires only some development to reach the second mark while a 3 mark 'explain' question requires further development.

Where there is a question that asks to explain two ideas then you only need to provide some development for each rather than providing almost an extended response answer for one of these ideas. If a question is only worth 2 marks, you are not using your time effectively by writing a long answer.

Where questions require you to describe data it is important you focus on description rather than trying to explain particular features of the data. Description can be identification of a trend or pattern (increase, decrease, fluctuation) which can be developed with further description (eg particular years where the pattern/trend changed), or through use of data to support the initial

point.

Spend some time reviewing the different stages of geographical enquiry to ensure you are aware of what takes place at the different stages. This will help you to prepare for extended response questions in section B, which target different stages in the enquiry. Pay attention to the stage of the enquiry being assessed to ensure you are providing the right response, eg recognising the difference between data collection methods and data presentation techniques.

Be really clear which type of geographical fieldwork you have completed and which question in the exam paper this will align with: Energy and Economic Activity, Rural Environments or Urban Environments.

You are encouraged to use the Sample Assessment Materials (SAMs), specimen papers and past papers to familiarise yourself with the structure of the paper and the style of questions; this will hopefully avoid situations where the rubric has not been followed.

Review support material to become more familiar with the range of command words and how they are attached to different Assessment Objectives.

Only write within the answer space provided, and not underneath or to the side of the answer space. Do not write in the margins of the page, or on blank parts of pages in the exam script. Use additional pages if you need more answer space and make sure these are clearly labelled with the question number.
